

Supply Demand Modelling

Total Estimated Workforce in Electrical Occupations — High Growth Scenario

Forecasted labour market demand for workers in the electricity to meet expansion and replacement needs, compared with the forecasted supply of new qualified labour (e.g., recent graduates, immigrants), and the potential gap between supply and demand. It may be noted that some of the forecasted demand may be met by sources that could not be fully accounted for in the supply-side modelling such as recruitment of additional qualified workers from other sectors. Both high growth and low growth scenarios were examined in this analysis.
